

Communication channel scorecard

When choosing a communication channel make sure it meets your security and privacy requirements. To do so, we recommend you inquire¹ primarily about the following features. Choose the channel that offer maximum security and privacy:

Channel/tool	Open source	Default E2E ²	Group chat	Encryption protocol	Anony-mous sign-up ³	Self- de-structing messages	Remote message deletion	Metadata collection	Paid	Juristicti-on	Self hosted	Usability
<i>E.g.: Facebook Chat</i>												

¹ Read online reviews and search for information available on the internet.

² End-to-end encrypted

³ Some channels allow you to create an account anonymously, for instance by email (you can then use a “ghost” email to create an account instead of a phone number which may identify you).
